

Now you have options when it comes to Synthetic Vision

Introducing the new two-screen Synthetic Vision
for the PC-12 brought to you by KCAC and
Universal Avionics

The two-screen offers the same great high-resolution system but configured for a new economical price. This features two screens with a Pilot Flight Display (PFD) and a navigational display (ND). The Universal Avionics Synthetic Vision System's Egocentric 3-D View is the most realistic rendering of terrain available. This technology brings in a new era of situational awareness and safety. The Exocentric View provides a 3-D perspective of the aircraft with respect to the flight plan and surrounding terrain.

The Universal Three Screen gives you redundancy and added safety. Whether you install the two-screen or three-screen system, the KCAC/Universal system provides flexibility and numerous options for each individual's needs.
